MISSISSIPPI STATE DEPARTMENT OF HEALTH 2013 MAY 31 AM 8: 43 BUREAU OF PUBLIC WATER SUPPLY

CCR CERTIFICATION FORM
CALENDAR YEAR 2012

Out Association Line.

Public Water Supply Name D170019 + 0170013
List PWS ID #s for all Community Water Systems included in this CCR The Federal Safe Drinking Water Act (SDWA) requires each Community public water system to develop and distribute a Consumer Confidence Report (CCR) to its customers each year. Depending on the population served by the public water system, this CCR must be mailed or delivered to the customers, published in a newspaper of local circulation, or provided to the customers upon request. Make sure you follow the proper procedures when distributing the CCR. Since this is the first year of electronic delivery, we request you mail or fax a hard copy of the CCR and Certification Form to MSDH. Please check all boxes that apply. Customers were informed of availability of CCR by: (Attach copy of publication, water bill or other) Advertisement in local paper (attach copy of advertisement) On water bills (attach copy of bill) Email message (MUST Email the message to the address below) Other Date(s) customers were informed: 05/23/13, //, CCR was distributed by U.S. Postal Service or other direct delivery. Must specify other direct delivery methods used Date Mailed/Distributed: / / CCR was distributed by Email (MUST Email MSDH a copy)

Date Emailed: / /

As a URL (Provide URL _______) As a URL (Provide URL As an attachment As text within the body of the email message CCR was published in local newspaper. (Attach copy of published CCR or proof of publication) Name of Newspaper: DeSoto Times - Tubure Date Published: 05/23/13CCR was posted in public places. (Attach list of locations)

Date Posted: ____/___ CCR was posted on a publicly accessible internet site at the following address (**DIRECT URL REQUIRED**): **CERTIFICATION** I hereby certify that the 2012 Consumer Confidence Report (CCR) has been distributed to the customers of this public water system in the form and manner identified above and that I used distribution methods allowed by the SDWA. I further certify that the information included in this CCR is true and correct and is consistent with the water quality monitoring data provided to the public water system officials by the Mississippi State Department of Health, Bureau of Public Water Supply. Nack (Carley). Ma Name/Title (President, Mayof, Owner, etc.)

Deliver or send via U.S. Postal Service: Bureau of Public Water Supply P.O. Box 1700 Jackson, MS 39215

May be faxed to: (601)576-7800

May be emailed to: Melanie, Yanklowski@msdh.state.ms.us **AFFP**

2013 MAY 31 AM 8: 43

PN: WATER QUALITY REPORT

Affidavit of Publication

DESOTO TIMES-TRIBUNE STATE OF MISSISSIPPI } COUNTY OF DESOTO }

DIANE SMITH, being duly sworn, says:

That she is a Clerk of the DESOTO TIMES-TRIBUNE, a newspaper of general circulation in said county, published in Hernando, DeSoto County, Mississippi; that the publication, a copy of which is printed hereon, was published in the said newspaper on the following dates:

May 23, 2013

That said newspaper was regularly issued and circulated

on those dates. **SIGNED**

Clerk

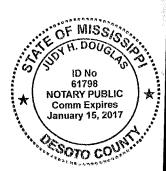

Subscribed to and sworn to me this 23rd day of May 2013.

YDOUGLAS, Notary, DeSoto County, Mississippi

My commission expires: January 15, 2017

00003070 00021321 662-781-1122

Heather Clolinger Walls Water Association 6200 Goodman Road Walls, MS 38680

2012 Annual Drinking Water Quality Report Walls Water Association, Inc. PWS#: 0170019 & 0170043 May 2013

We're pleased to present to you this year's Annuel Quality Wafer Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Lower Wilcox Aquifors.

The source water essessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and it a svaliship for viewing upon request. The wells for the Walls Water Association have received lower to moderate rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Wade Carter, Manager at 682,761.3722. We want our valued customers to be informed about their water utility. If you have a concern, you can meat with the board, by request at our regularly scheduled meetings. They are held on the fourth Tuesday of the month at 4:00 PM at the Walls Water Office located at 6200 Goodman Road W. Annual meeting 4. Thursday in July at 7:00 PM at the Walls Library.

We multinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January; 1" to Docember 31", 2012. In cases where monitoring warn't required in 2012, the table reflects the most recent results. As water travels over the surface of land or underground, it discovers a naturally occurring minerals and, in some cases, radioactive meterials and can pick up substances or contaminants from the presence of animate or from human activity, microbial contaminants, such as a settle and metals, which can be neturally occurring or the sust from under activity, microbial contaminants, and activity, as yet as settle and metals, which can be neturally occurring or the sust from under adominants, such of sources such as agriculture, urban storm-water runnoff, industrial, or domestic wasterwater discharges, oil and ges production, mining, or radictivity is settle or the such as a settle and metals, which can be neturally occurring or the time contaminants, including synthetic and volatile organic chemicals, which are by producted industrial be naturally occurring or be the result of oil and ges production and mining activities. In order to ensure that the year of the settle of this, including synthetic and volatile organic chemicals, which are by producted of industrial be naturally occurring or be the result of oil and ges production and mining activities. In order to ensure that the year is set to drink, including bottler, and can also come from ges stations and septic systems; radioactive contents, which are production and mining activities. In order to ensure that the year is set to drink, including bottler, and can be constituents to exercise provided by public water systematins, which can be naturally occurring or the thresult of oil and ges production and mining activities. In order to ensure that the year is set to drink, including bottler, radioactive contents, which can be producted by

In this table you will find many terms and abbreviations you might not be familiar with. To help you batter understand these terms we've provided the following definitions:

Action Lavel - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow:

Maximum Contaminant Leval (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal"(MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) — The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Meximum Residuel Distributeriant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of distributeriants to control microbial conteminants. Perts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per iller - one part per billion corresponds to one minute in 2,000 years, or a single penny in

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for beceivinging that showed no collision present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When which has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 tested. Information on lead in divinking water, leating methods, and alops you can take to minimize exposure is available from the Safe Orinking Water Holline or at him thousands.

Most recent sample. No sample required for 2012.
 Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l.

Comm Expires Unougry 15, 2017

800 COUNTY

* Most recent zomple. No zomple required for 2012. ** Fluoride level is routinely adjusted to the MS State Dept of Health's recommended level of 0.7 - 1.3 mg/l.

We are required to monitor your drinking water for specific constituents on a monthly basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. We did complete the monitoring requirements for bacteriological sampling that showed no coliform present. In an effort to ensure systems complete all monitoring requirements, MSDH now notifies systems of any missing samples prior to the end of the compliance period.

Corresion of household plumbles systems, erosion of natural deposits.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women end young children. Lead in dirinking water is primarily from malerials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality dirinking water, but cannot control the variety of materials used in plumbing components. When your water has been altiting for several hours, you can minimize the potential for lead exposure by flushing your top of seconds to 2 is seconds to 2 individual control in the second provided provided in the second provided in the second provided in the second provided in the second provided provided in the second provided in the second provided in the second provided p

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the Walls Water Association # 0170019 is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year that average fluoride samples results were within the optimal ranger of 0.7 ~ 1.3 ppm was 5. The precentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7 ~ 1.3 ppm was 3.0%.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the Walls Water Association — Lake Forest # 0170043 is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendary ear that average fluoride samples results were within the optimal ranger of 0.7 — 1.3 ppm was 4. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7 – 1.3 ppm was 33%.

All cources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inergenic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-428-4791.

Some)people may be more vulnerable to conteminants in drinking-water than the general population, immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergoine organ transplants, people with HIV/AIDS or other immune system disordars, some identity, and infants can be particularly at trisk from infactions. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on epropelate means to lessen the fast of infaction by. Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Holline 1.800.426.4781.

"April 1, 2013 MESSAGE FROM MSDH CONCERNING IRADIO_OGCAL SAMPLING "
In accordance with the Radionucides Rule, all community public water supplies were required to sample quarterly for redionucides beginning January 2007 - December 2007. Your public water supply completed sampling by the scheduled deadfine, however, during an audit of the Mississippl State Department of Health Radiological Health Lacky, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although these of the results are the supply MSDH was required to issue a violation. This is to notify you that as off his date, your water, system has completed the monitoring requirements and is now in completors with the Radionucides Rule. If you have any questions, please contact Keren Weiters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at 801 (5787516.)

The Walls Water Association works cround the clock to provide top quality water to every tep. We ask that all our customers helious protect our water sources, which are the heart of our community, our way of life and our children's future.

2012 Annual Drinking Water Quality Report Walls Water Association, Inc. PWS#: 0170019 & 0170043 May 2013

We're pleased to present to you this year's Annual Quality Water Report. This report is designed to inform you about the quality water and services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to providing you with information because informed customers are our best allies. Our water source is from wells drawing from the Lower Wilcox Aquifers.

The source water assessment has been completed for our public water system to determine the overall susceptibility of its drinking water supply to identified potential sources of contamination. A report containing detailed information on how the susceptibility determinations were made has been furnished to our public water system and is available for viewing upon request. The wells for the Walls Water Association have received lower to moderate rankings in terms of susceptibility to contamination.

If you have any questions about this report or concerning your water utility, please contact Wade Carter, Manager at 662.781.3722. We want our valued customers to be informed about their water utility. If you have a concern, you can meet with the board, by request at our regularly scheduled meetings. They are held on the fourth Tuesday of the month at 4:00 PM at the Walls Water Office located at 6200 Goodman Road W. Annual meeting 4th Thursday in July at 7:00 PM at the Walls Library.

We routinely monitor for constituents in your drinking water according to Federal and State laws. This table below lists all of the drinking water contaminants that were detected during the period of January 1st to December 31st, 2012. In cases where monitoring wasn't required in 2012, the table reflects the most recent results. As water travels over the surface of land or underground, it dissolves naturally occurring minerals and, in some cases, radioactive materials and can pick up substances or contaminants from the presence of animals or from human activity; microbial contaminants, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife; inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm-water runoff, industrial, or domestic wastewater discharges, oil and gas production, mining, or farming; pesticides and herbicides, which may come from a variety of sources such as agriculture, urban storm-water runoff, and residential uses; organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations and septic systems; radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities. In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily indicate that the water poses a health risk.

In this table you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

Action Level - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Maximum Contaminant Level (MCL) - The "Maximum Allowed" (MCL) is the highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

Maximum Contaminant Level Goal (MCLG) - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Maximum Residual Disinfectant Level (MRDL) – The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG) - The level of a drinking water disinfectant below which there is no known or expected risk of health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Parts per million (ppm) or Milligrams per liter (mg/l) - one part per million corresponds to one minute in two years or a single penny in \$10,000.

Parts per billion (ppb) or Micrograms per liter - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

Picocuries per liter (pCi/L) - picocuries per liter is a measure of the radioactivity in water.

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Our water system is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at http://www.epa.gov/safewater/lead. The Mississippi State Department of Health Public Health Laboratory offers lead testing. Please contact 601.576.7582 if you wish to have your water tested.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the Walls Water Association # 0170019 is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year that average fluoride samples results were within the optimal ranger of 0.7 – 1.3 ppm was 6. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7 -1.3 ppm was 30%.

To comply with the "Regulation Governing Fluoridation of Community Water Supplies", the Walls Water Association – Lake Forest # 0170043 is required to report certain results pertaining to fluoridation of our water system. The number of months in the previous calendar year that average fluoride samples results were within the optimal ranger of 0.7 – 1.3 ppm was 4. The percentage of fluoride samples collected in the previous calendar year that was within the optimal range of 0.7 -1.3 ppm was 33%.

All sources of drinking water are subject to potential contamination by substances that are naturally occurring or man made. These substances can be microbes, inorganic or organic chemicals and radioactive substances. All drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by Cryptosporidium and other microbial contaminants are available from the Safe Drinking Water Hotline 1.800.426.4791.

*****April 1, 2013 MESSAGE FROM MSDH CONCERNING RADIOLOGICAL SAMPLING*****

In accordance with the Radionuclides Rule, all community public water supplies were required to sample quarterly for radionuclides beginning January 2007 – December 2007. Your public water supply completed sampling by the scheduled deadline; however, during an audit of the Mississippi State Department of Health Radiological Health Laboratory, the Environmental Protection Agency (EPA) suspended analyses and reporting of radiological compliance samples and results until further notice. Although this was not the result of inaction by the public water supply, MSDH was required to issue a violation. This is to notify you that as of this date, your water system has completed the monitoring requirements and is now in compliance with the Radionuclides Rule. If you have any questions, please contact Karen Walters, Director of Compliance & Enforcement, Bureau of Public Water Supply, at 601.576.7518.

The Walls Water Association works around the clock to provide top quality water to every tap. We ask that all our customers help us protect our water sources, which are the heart of our community, our way of life and our children's future.
